

China Factory Melanotan 2 Peptide Raw Powder 10mg For Skin Pigmentation

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Melanotan II
- Minimum Order Quantity: 5 boxes
- Price: Negotiable
- Packaging Details: 10mg/vial, 10vials/box ;5mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: MoneyGram, Western Union, T/T
- Supply Ability: 20000boxes/Month

Product Specification

- Product Name: China Factory Melanotan 2 Peptide Raw Powder 10mg For Skin Pigmentation
- CAS Number: 121062-08-6
- Molecular Formula: C50H69N15O9
- Molecular Weight: 1024.2
- Product Purity: 99%
- Ingredient: White Powder
- Sell By: 2 Years
- Highlight: **10mg MT2 Powder ,
Melanotan 2 Peptide Raw Powder ,
Skin Pigmentation Melanotan 2 Peptide**

Product Description

China Factory Melanotan 2 Peptide Raw Powder 10mg 5mg For Skin Pigmentation

Melanotan II (MT2) is a stimulating peptide that induces darkening of the skin. Melanocyte-stimulating hormone (MSH) is a class of peptide hormones produced in the middle lobe of the pituitary gland that stimulates the production and release of melanin by pigment cells (melanocytes) in the skin and hair, resulting in darkening of the skin and hair. Melanotan II increases melanin production by stimulating skin pigment cells called melanocytes.

Melanin is the skin pigment produced to protect our skin from the sun's UV radiation and damage. It can be thought of as our body's own natural sunscreen. Low melanin levels mean that the skin is highly susceptible to DNA damage from excessive sun exposure. This lack of melanin and its protection against UV radiation means that those with fair skin have a tendency to burn and are at greater risk of DNA damage. It also means that they have to invest a lot of time to safely tan without burning.

Getting an adequate supply of vitamin D from the sun without the risk of melanoma is somewhat of a balancing act. Studies have already found that not getting sunlight to prevent melanoma can lead to vitamin D deficiency.

How to stimulate Melanotan 2 Peptide Raw Powder 10mg 5mg For Skin Pigmentation?

In order to tan safely, we need to stimulate the melanocyte-stimulating hormone responsible for increasing melanin production. Scientists have discovered the use of "tanning peptides" while researching possible treatments for skin cancer. They hypothesised that the body's natural pigment system, induced by the melanogenic process, could produce a protective tan before UV exposure, thus reducing the likelihood of skin damage.

The release of a melanocyte stimulating hormone stimulates the melanocytes in the skin to naturally increase melanin production whenever there is a little UV exposure. The use of Melanotan Peptides provides more a-MSH, resulting in more melanin production and greater tanning potential (skin pigmentation), regardless of your skin type.

Clinical trials have shown that the use of Melanotan II may have the potential to boost melanogenesis with minimal side effects. The main role of melanogenesis is to protect the subcutaneous layer, the layer under the skin, from the effects of UVB rays. It works by absorbing all UV-B light and thus preventing it from entering the skin layer.

Basic Details of China Factory Melanotan 2 Peptide:

Product Name	China Factory Melanotan 2 Peptide Raw Powder 10mg For Skin Pigmentation
CAS NO.	121062-08-6
Purity	99%
Molecular Weight	1024.2
Molecular Formula	C50H69N15O9
Appearance	White Powder
Store	Cool Dry Place
MOQ	5 boxes
