

99% purity Cosmetic Peptide Skin Perfection Snap 8 10mg/Vial White Powder

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-snap 8
- Minimum Order Quantity: 5 boxes
- Price: negotiable
- Packaging Details: 10mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: MoneyGram, Western Union, T/T
- Supply Ability: 20000 boxes/month

Product Specification

- Item: Liraglutide For Sale
- Assay: 99.9%
- Unit Quantity: 1 Vial
- Unit Size: 10mg/vial
- Synonyms: Acetyl Glutamyl Heptapeptide-3
- Outlook: White Lyophilized Powder
- Chemical Names: Ac-Glu-Glu-Met-Gln-Arg-Arg-Ala-Asp-NH2
- Molecular Formula: C41H70N16O16S
- Molecular Mass: 1074.50
- Storage: Cool Dried Storage

Product Description

99% Purity Cosmetic Peptide Skin Perfection Snap 8 10mg/Vial White Powder

SNAP 8 Peptide 10mg

SNAP 8 is an octapeptide scientifically known as acetyl glutamyl heptapeptide. This peptide acts as a muscle contraction inhibitor to reduce the depth of fine lines and wrinkles by restraining the muscles used in common facial expressions such as smiling and frowning. According to research, peptide button 8 is particularly effective for lines around the forehead and eyes. This combination of eight amino acids was produced in the laboratory and acts as a muscle contraction inhibitor.

Studies have shown that SNAP-8 peptide possesses properties that allow it to reduce the depth of wrinkles caused by daily muscle contractions, such as facial expressions. In animal studies, SNAP-8 peptide injections showed significant effects on the forehead and around the eyes. Although it acts similarly to Botox by targeting the same line formation, it is considered safer and more affordable, as studies on animals have shown.

SNAP 8 is an analog of the N-terminal of snap25. It competes with the peptide to localize in the SNARE complex, thereby regulating its production. SNARE stands for SNAP receptor, and SNAP is an acronym for soluble NSF attachment protein. When the SNARE complex is unstable - even slightly - it prevents vesicles from effectively releasing neurotransmitters. As a result, muscle contraction is reduced, preventing the formation of fine lines and wrinkles. As studies have shown, it can also help resolve existing lines by inhibiting SNARE complex production and catecholamine release.

Clinical studies with SNAP-8 have shown that this peptide helps reduce wrinkles around the eyes and makes good skin perfection, as studies with animal test subjects have shown that this peptide can reduce up to 63.13%. In vitro and in vivo efficiency tests have shown that the peptide is 30% more active than the parent peptide (e.g.), as shown in studies on animals.

Basic Information of Skin Perfection Snap 8:

Item	10 mg/ vial
Unit Size	10 mg/vial
Purity	99.9%
Sequence	Ac-Glu-Glu-Met-Gln-Arg-Arg-Ala-Asp-NH ₂
Molecular Formula	C ₄₁ H ₇₀ N ₁₆ O ₁₆ S
Molecular Mass	1074.50
Synonyms	Acetyl Glutamyl Heptapeptide-3
Appearance	Lyophilized White Powder
Source	Chemical Synthesis
Storage	Cool dried storage
MOQ	5 boxes

Snap 8 benefits:

1. Smooth skin

The skin can lose its moisture if it is exposed to sun, wind, pollution, and other air conditions. Dry lines and wrinkles will develop when the skin doesn't have enough moisture. These lines can make you appear older and more tired than your actual age. Snap 8 addresses the root cause of muscle contraction inhibition. This reduces wrinkles and fine lines.

2. Stimulate collagen production

Snap 8 is thought to increase collagen production, making the skin look younger and smoother. As we age, our collagen production decreases and our skin becomes less elastic. The skin can be firmed and affected by peptides.
